ARGO Tractors is the tractor engineering and manufacturing division of **ARGO SpA**.
AgriArgo UK is the distributor of **McCormick** brand tractors in **Great Britain**.

PRESS RELEASE – July 2011

New McCormick compact and utility tractors to be unveiled at Saltex show

- First examples of new compact models from 22hp to 34hp at dealers
- Choice of gearbox or hydrostatic drive to suit different applications
- Loader and rear- or mid-mounted groundscares attachments available

The first examples of a new range of McCormick compact tractors are reaching dealers as distributor AgriArgo UK prepares a public launch at the IOG Saltex show in September.

In all, the McCormick X10 Series spans 22hp to 91hp with nine base models and 17 variants giving groundscares equipment operators a choice of specification to suit different applications and work loads. In addition, hydraulic loaders and turfcare attachments are available.

Operators will benefit from the after-sales support resources of two international manufacturers – ARGO Tractors of Italy, which already produces the McCormick GM Series compacts and the C-Max, T-Max and X60 Series full-size turf and highways tractors, and Daedong Industrial, the Korean manufacturer supplying the new compacts to ARGO's requirements.

"Apart from any spares stocked by our local McCormick dealers, we at AgriArgo UK have identified the top 100 fastest-moving parts and added them to the comprehensive parts stock held at our Harworth base," explains Ray Spinks, general manager and sales director, AgriArgo UK. "We can also call on parts held by Daedong at its European facility in Holland, and on items in the ARGO Tractors parts system in Italy."

The smallest tractors among the newcomers are the McCormick X10.25, X10.30 and X10.35, all powered by three-cylinder Daedong engines. Outputs of 22hp, 28hp and 34hp mark these machines out as ideal for maintaining areas of amenity grass too large or rough for a top-spec ride-on mower.

While the 22hp machine comes with two-speed hydrostatic drive or a six forward, two reverse speed gearbox, the 28hp and 34hp machines have three-speed hydro to make use of the extra power or a shuttle gearbox giving eight speeds in either direction.

All three are available only with an open operator's platform and roll-over hoop.

The new X10 Series tractors are backed by two years' manufacturer warranty and, like all McCormick machines, are protected by the CESAR Datatag theft-deterrence system, which is installed as standard.
